Flowers

English elms are hermaphrodites, both male and female reproductive parts are contained within the same flower.

Flowers are dark pink to red and hang in tassels, appearing between February and March.

English Elm

Elms used to be associated with melancholy and death.

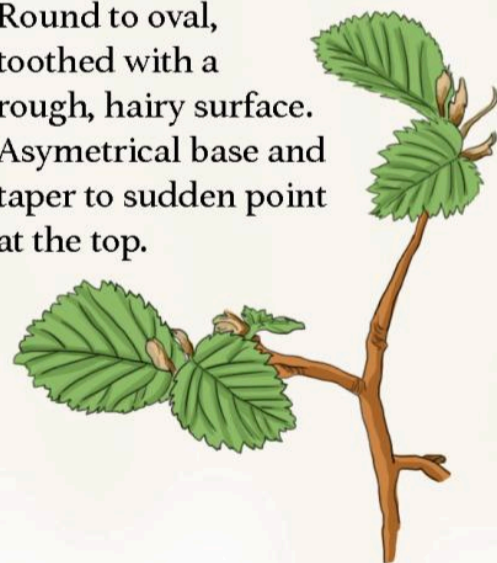

Elm wood is the preferred choice for coffins.

ILLUSTRATION X

European Goldfinch

The European Goldfinch has happy and sweet-sounding songs.
It migrates to North Africa in winter and lives up to 8 years.

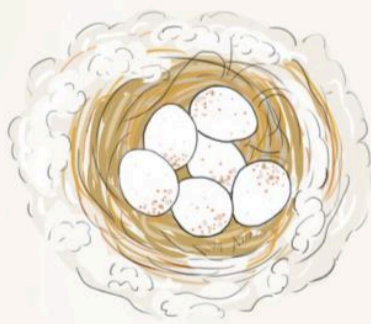

The male red mask extends behind the eye

male

Male goldfinches trills loudly to catch the attention of a female.

ILLUSTRATIONX
Claire Rollet

clutch

A couple of days after completion of the nest, the eggs are laid in the early morning at daily intervals.

juvenile

The young ones are reared and protected by both parents.

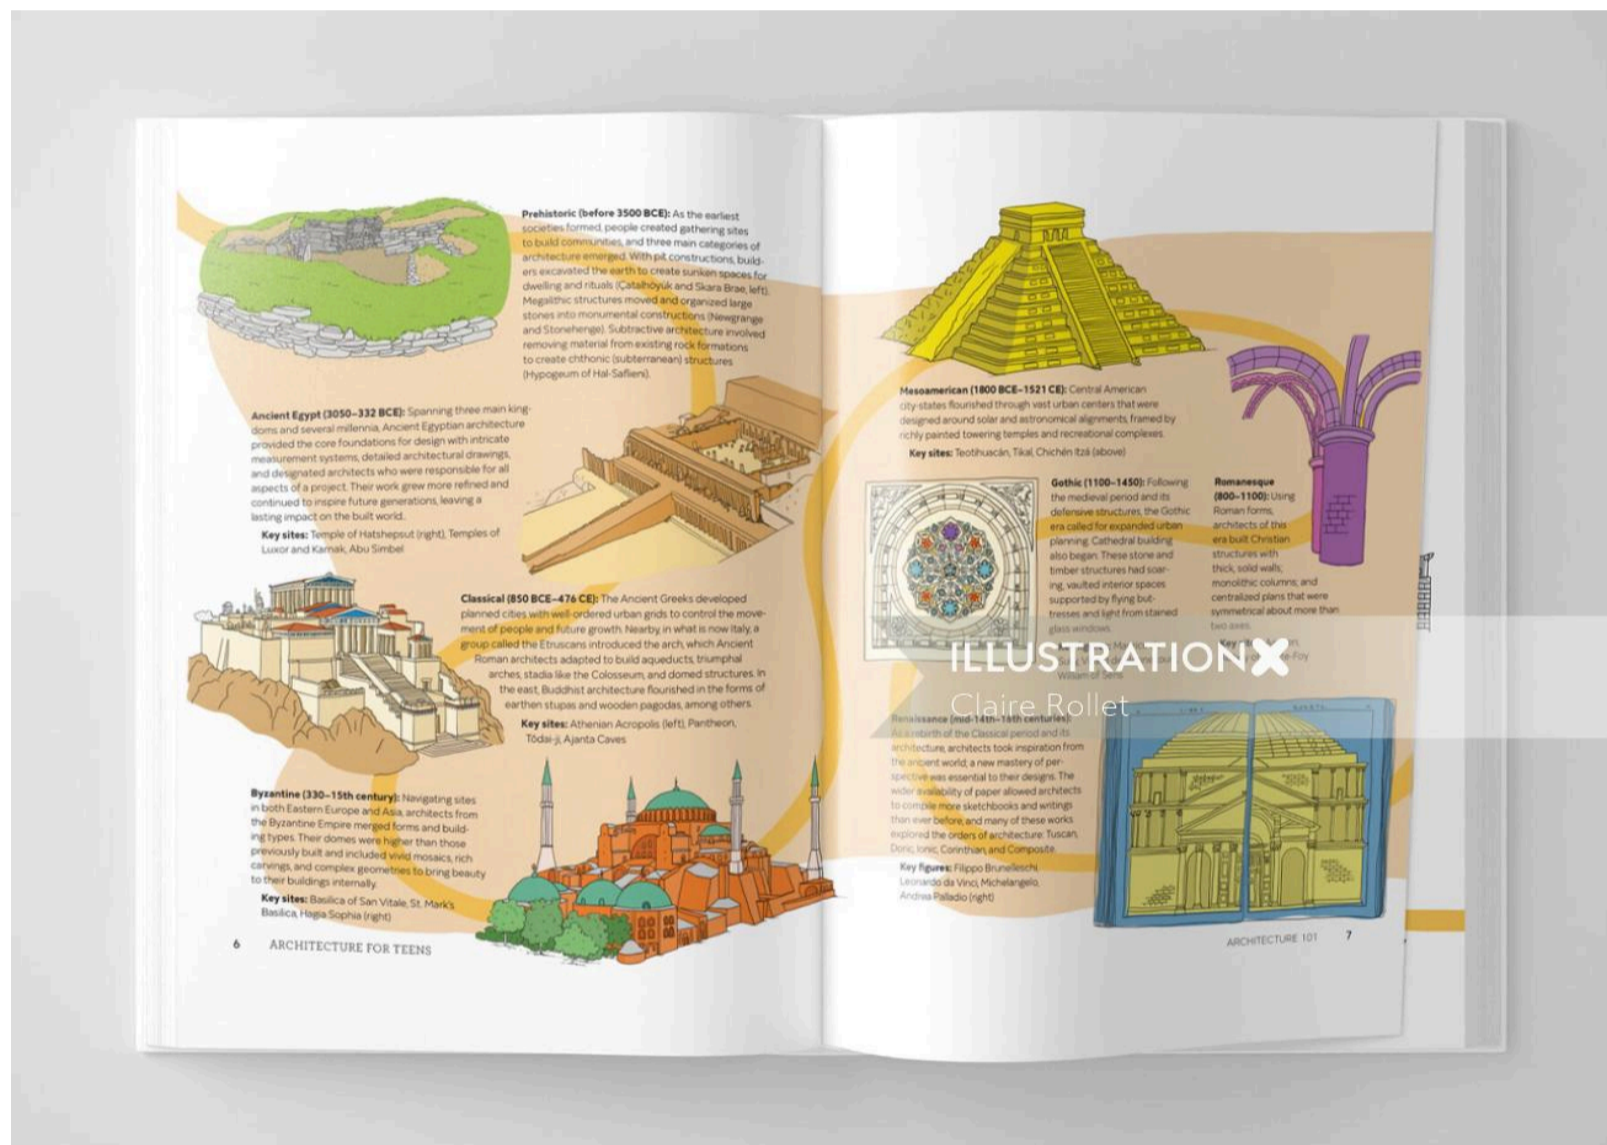

female

Female goldfinches incubate eggs and construct nests.

Northern Cardinal

The Northern Cardinal does not migrate and is native of North America.
It is known for its melodious trill and symbols with deep historical and mystical significance.

The Northern Cardinal has a distinctive crest of feathers on top of their heads.

male

During the courtship process the male brings the female food she eats.

ILLUSTRATIONX
Claire Rollet

clutch

The female lays 2-5 eggs per clutch which takes 11-13 days for the eggs to hatch.

juvenile

At 10-11 days the chicks leave the nest but carry on receiving care from their parents for weeks.

female

the female plumage is muted and offers great camouflage while nesting.
