FUTURE WORLD OF TECHNOLOGY

Physicists believe that at the tiniest scales, space emerges from quanta

Einstein never got very far

Down the black hole

What does the future work look like?

Even if scientists and marketers can't get access to our brains for neurohacking or neuromarketing, can they get access to our data?

Space exploration has taken some hits in the 21st century, with cuts to the U.S. and other international space program budgets.

(MATTER) = SPACETIME • (SQUARED)

What Is Spacetime?

Who's going to it?

Curious

Conscious

Capable

You need to inspire a sense of curiosity!

What's your measure of success?

How can we achieve our objectives?

Computer companies encourage forward-looking creativity and some, such as IBM, even have futurists on hand to predict where technology is headed.

THIS OUR STORY!

THIS IS WHAT WE WILL DO NEXT!

MANY INVENTIONS ARE BORN IN THE LAB AND NEVER MAKE IT INTO THE CONSUMER MARKET

Futurists can do out some exciting and downright scary visions for the future of machines and science.

Where are we going and WHY?

What does the 6th sense even mean?

Forecasting the future of technology.

Next, we'll take a look at some sound-biting items, tiny tools for molecules, huge bunches of data and some disgruntled bands of people who may want to set all of this innovation back with the stroke of a keyboard.

We need to walk the talk

TEAM MINDSET

PLANTING SEEDS

The VCR became obsolete before many of us learned how to program one.

DISCONNECT

A kitchen magnet neatly demonstrates the problem that physicists face. It can grip a paper clip against the gravity of the entire Earth.
